**Eddie Holmes**  
CEO, Unissu

Our Uniscore Reports apply Unissu's unique data about Protect vendors and how our users interact with them to help you identify and select the right solutions for your business.

This edition is our Q4 2022 report covering Access Control. To help you understand these companies and the wider market for Access Control solutions, we've added a range of new data points and insights.

By appraising yourself of these companies, you'll have a good idea of the key players, their features and use cases, and be in a stronger position to make smart purchasing decisions.

## WINNER

SmartRent is bringing smart home automation to property managers and renters. Whether you develop, own or manage multifamily communities, our platform enables you to control all the smart devices in your properties. Property managers can monitor all vacant unit activity and remotely control door locks, thermostats, cameras, lights and hundreds of other smart devices. When a unit is filled, the residents can seamlessly control their smart devices through our app, giving them an unparalleled resident experience.

Our smart home products and solutions were conceptualised, innovated and built by former multifamily operators to maximise efficiency, increase convenience, oversee asset protection and more, all from one dashboard. From self-guided tours to parking management and access control, SmartRent's integrations, partnerships and purpose-built solutions provide endless options for owners and developers to create a customised automation platform that works for them. Our cloud-based access control system provides hands-free access solutions to address communities current needs while ensuring scalability for the future.

Alloy Access is a frictionless platform that can be utilised to protect communities and assets through the use of control panels, smart access locks and intercoms, with integrations to property management software and customer relationship platforms to keep data in one place. Combining Alloy Access with our other smart home products provides customers the ability to create a truly connected community.

## Funding

The top 20 firms in our Access Control ranking have raised almost \$476m between them. This doesn't include the funds raised by Lane and OfficeApp pre-acquisition.

## Methodology

We apply our unique algorithm to the proprietary insights derived from how our Unissu users engage with Protect companies, people and topics, to produce weight adjusted rankings of matching vendors. In addition to analysing how the market is interacting with itself, we also layer a range of data points about vendors including their age, funding history, team size and many others to generate a holistic understanding of each firm.

## 5TH PLACE

Operating Markets:  
United Kingdom +3 More

Doordeck lets you unlock your office from your phone – but does it in a way that's unlike anything else on the market. Instead of 'smart locks', which are costly, hardware-dependent and intensive to install, Doordeck can roll out smartphone access to an entire building in under 15 minutes by leveraging a building's \*existing\* access control infrastructure, rather than ripping it all out to replace it anew.

# FAQ

**Q How are the rankings calculated?**

**A** Our Unicode rankings are based on the behaviour we can observe inside the Unissu marketplace.

We utilise a range of datasets to do so. In addition to information about the vendors such as their age and funding, we also analyse how the vendors interact with the marketplace and how the marketplace interacts with the vendors.

Is a vendor appearing in search results more often than others? Do users spend more time looking at a vendor's profile? Are the vendors' team engaging in thought leadership?

All of this and more influences where a vendor ranks in a Unicode report.

**Q What areas of Protect do Unicode reports cover?**

**A** Uniscore reports cover the entire global Protect industry. We publish a range of regular reports covering some common areas but our analysis is available for any sub sector in any location. Ask us for more information on your specific requirements.

**Q Are the rankings a recommendation?**

**A** No, our Unicode reports are not a recommendation. Every buyer will have specific requirements around use cases or feature sets unique to them. Our reports are here to support initial discovery and analysis of the vendors that should be considered in the early stages of this process.

We recommend that buyers employ suitably qualified experts or speak to our partner when it comes to choosing the best solution for their particular needs.

**Q Is inclusion or position in the rankings paid for by Protect companies?**

**A** No, the rankings are not paid for by Protect companies. The rankings are determined by how Protect vendors utilise our platform and how others interact with the vendors. Almost all of these interactions take place with no commercial involvement by Unissu.

Protect companies may purchase services from Unissu that can influence certain data points. For example, search positioning (like Google Adwords) can ensure that they appear in more search queries. However, many data points (like procurement hit rate) cannot be influenced by Unissu.

Vendors may pay to place advertising in our Unicode reports but this does not count towards their ranking.

**Q I don't see the area I'm interested in. Can you still help?**

**A** Yes absolutely! Protect is such a wide field that we can't possibly hope to publish reports covering them all. However, we can produce bespoke reports for any subsector, technology or geography quickly and efficiently, at a flat cost of £2,500 + VAT

**Q How else can Unissu help me find the right solution?**

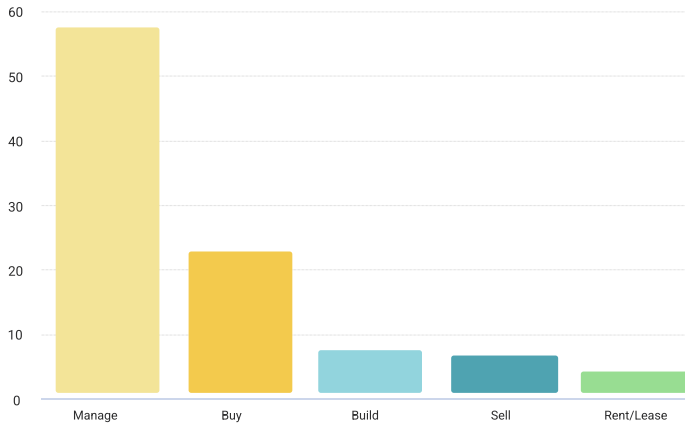

**A** Unicode reports are here to help you move beyond a simple understanding of any particular market and into a deeper dive, exploring the companies, their features and benefits that you may like to adopt in your business.

When you're ready to buy, it's essential to conduct a full market scan.
